REUSE

THE REGULATORY FRAMEWORK FOR PACKAGING IS BEING STRENGTHENED

French legislation 🇫🇷 comprises two key pieces of legislation:

- The **EGalim Act** (Act of the General Assembly on Food), passed in 2018, which aims to ensure fair commercial relations in the agricultural and food sectors and to promote healthy, sustainable and accessible food for all.
- The **AGEC Act** (Anti-Waste Act for a Circular Economy), passed in 2020.

These two laws complement each other in several respects. They aim to change consumption patterns, as well as to reduce pressure on natural resources and waste generation.

Within this regulatory framework, several measures apply to **re-use**:

- ✓ 01/01 2021 Bulk shopping is encouraged to reduce excess packaging (consumers can bring their own containers to shops). Government departments and local authorities must procure goods that have been reused or recycled, with the proportion varying according to the category of product concerned.
- ✓ 01/01 2022 Requirement to reuse and collect crockery and containers used for home meal delivery.
- ✓ 01/01 2023 Catering establishments with a seating capacity of more than 20 must serve food and drink consumed on the premises in reusable tableware.
- ✓ 01/01 2025 Catering services offering takeaway meals provide customers with reusable containers or those made from recyclable materials.
- ✓ 01/01 2026 A 20 % reduction in single-use plastic packaging, half of which will be achieved through reuse and recycling.
- ✓ 2027 The aim is to achieve 10 % reused packaging.

But that's not all. **The European PPWR** (Packaging and Packaging Waste Regulation) 🇪🇺 will come into force in **August 2026**. It applies to all packaging and packaging waste, regardless of the material used or the context in which it is used. Packaging may only be placed on the market if it complies with the regulation.

Here too, clear **targets** have been set:

Transport packaging

For operators providing more than one tonne of packaging per year:

- **01 January 2030**: the proportion of **reusable packaging** for transport or sale (pallets, crates, etc.) must be 40 % (and 70 % by 1 January 2040).
- **01 January 2040**: the proportion of **reusable groupage packaging** (excluding cardboard boxes) must be 10 % (and 25 % by 1 January 2040).

Takeaway

The regulatory framework is accompanied by changing consumer trends, with the use of reusable containers gradually becoming the norm.

- **12 February 2027**: the sale of food and drink in the HORECA sector (Hotels, Restaurants and Cafés) must allow consumers to bring their own containers to be filled.
- **12 February 2028**: products on sale may be made available in **reusable packaging**
- **2030**: **10% of products** on sale must be packaged in reusable packaging.

REUSE

WHAT IS REUSE?

The French Environmental Code defines reuse in Article L.541-1-1 as: 'any operation whereby substances, materials or products that are not waste are used again for the same purpose for which they were originally designed.'

For example, a **deposit glass jar**.

Reuse should be distinguished from repurposing, which refers to waste being used again after refurbishment, possibly diverting it from its original use.

For example, a ceramic ramekin repurposed for decoration

For example, a **ceramic ramekin repurposed for decoration**.

COMATEC IS COMMITTED TO REUSING

Aware of the environmental impact of single-use packaging, we have been shifting our product range towards reusable solutions for several years now.

In 2025, we launched new reusability tests in a laboratory to assess the number of **wash cycles** 🔄 our products can withstand without deteriorating, under conditions that closely mirror real-life use. Some can be used for **up to 125 cycles** ✂️. This means fewer new products are manufactured, thereby saving natural resources.

In this brochure, we are pleased to present our reusable containers, which guarantee:

- Convenience, quality and durability.
- Suitability for industrial and on-site washing, depending on the material.
- Recyclability wherever possible, right up to the end of the product's life.

REUSABLE MATERIALS

PS Polystyrene

Available in clear or coloured versions with a glossy finish, PS is lightweight and very rigid. A recycling scheme for this material is currently being rolled out in France.

PP & PP-talc Polypropylene

PP is strong, microwave-safe and impact-resistant. It can be coloured. Some ranges are made from PP-talc: by adding talc to PP, we reduce plastic usage by 20 % and produce more durable products. PP is recyclable.

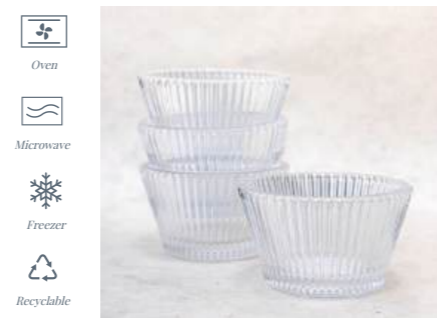

Ceramics & Porcelain

Made from natural materials, ceramic is heat-resistant and corrosion-resistant. It is non-porous, so it does not absorb odours or flavours. Porcelain, made from kaolin, is highly heat-resistant. Although more susceptible to breakage than ceramic, it is also thinner and more elegant.

Glass

Glass is largely washable and reusable, and can be recycled 100 % an infinite number of times. Transparent and durable, it is also ideally suited to a deposit-and-return scheme.

Bamboo & wooden boards

Made from natural, fast-growing materials that require little water, the bamboo and acacia wood used in our boards are moisture-resistant. They can be hand-washed with a soft cloth, reused several times and recycled at the end of their life.

Stainless steel & Aluminium

Versatile and robust, stainless steel is corrosion-resistant. Its smooth surface makes it easy to clean. It is durable and can be recycled indefinitely. Aluminium tableware is lightweight, resistant to deformation and corrosion, and can be recycled.

PLANETSCORE®

SUPPORTING OUR CUSTOMERS

Planetscore®, #1 the leading environmental benchmark in the packaging sector, was created by Comatec in 2020 and further developed in 2024. It is based on Oven criteria and their sub-categories, which are rooted in a product's 'life cycle' approach. The resulting ratings from A to E indicate the environmental impact of each of our products. This provides catering professionals with a tool that enables them to incorporate sustainability into their packaging choices ✓

The criteria

www.planetscore.eu

Comatec is committed to corporate social responsibility. Our range of reusable products, such as Planetscore®, are prime examples of this. Would you like to find out more? Please feel free to read our **CSR report** !

Our CSR strategy is reflected in concrete, regular actions. Thanks to this commitment to continuous improvement, we were awarded the **Ecovadis Gold rating** in May 2025. Comatec's performance in the area of sustainable development was ranked in the top 5% of the companies assessed.
